SUMMARY

Results-oriented Software Engineer specializing in backend architecture, system design, and performance optimization. Develops scalable, secure server solutions for complex applications. Adept at cross-team collaboration to deliver full product lifecycles—from backend systems to frontend and CRM integrations. Recognized for analytical problem-solving and delivering efficient, high-quality software.

EXPERIENCE

Software Engineer

Mar '24 — Mar '26

Vsisters (Private) Limited

Islamabad, Pakistan

As a Senior Software Engineer at Vsisters (Private Limited), I am responsible for designing, developing, and maintaining the company's core backend systems and application infrastructure. My role focuses on building reliable, scalable, and secure services that power the Vsisters mobile app and dashboard. I collaborate closely with cross-functional teams to ensure seamless integration between backend services, frontend interfaces, and third-party systems, delivering a smooth and efficient user experience for the platform.

- Built scalable **REST APIs** using Node.js, **Express.js**, and MongoDB, ensuring high performance and maintainability.
- Integrated **payment** gateways including **JazzCash** and **EasyPaisa** for seamless in-app transactions.
- Managed **AWS ECS** deployment, optimized **Docker containers**, and configured S3 Buckets for secure media storage.
- Used Redis for caching and session management to improve system efficiency and response time.
- Implemented background job processing and scheduling with **BullMQ** for notification and task automation.
- Designed the admin **dashboard** backend for operational control, analytics, and user management.
- Collaborated with frontend teams to ensure seamless API integration and system reliability.
- Maintained system uptime, optimized database queries, and enhanced backend performance across all services.

Associate Software Engineer

Dec '22 — Dec '23

Innovadel Technologies Limited/Geo Information System

Lahore, Pakistan

As an Associate Software Engineer at Innovadel Technologies, I work in developing scalable solutions within the Salesforce ecosystem for the Geo-Information System sector. My core responsibilities included:

- Served as a key developer for **Salesforce Core** and B2B Commerce Cloud (**LWR**), building custom, responsive stores clients
- Led the development of a Progressive Web App (**PWA**) using a modern tech stack of React.js and SFCC Node.js, focusing on creating a seamless, app-like shopping experience.
- Designed and implemented **Apex classes** for complex business logic, including a custom inventory management system (Apex Inventory). I also developed and consumed **REST APIs** to ensure smooth data flow between platforms.
- Utilized the **Salesforce Lightning framework** (Apex, JavaScript, HTML, CSS) to build dynamic and user-friendly interfaces, delivering complete, secure, and high-quality features from concept to deployment.

EDUCATION

Bachelors in Computer Science, University Of Central Punjab (GPA: 2.62)

Oct '18 — Aug '22

Lahore, Pakistan

PROJECTS

VSisters – Ride-Hailing App [Link](#)

- Designed and developed the complete backend architecture for the Vsisters platform.
- Built and maintained APIs supporting mobile and dashboard applications.
- Implemented secure user authentication, real-time updates, and data management.
- Integrated digital payment systems to enable seamless in-app transactions.
- Deployed and managed scalable server infrastructure ensuring high performance.
- Collaborated with frontend and operations teams for feature delivery and system stability.
- **Tech Stack:** Node.js, Express.js, MongoDB, Redis, Socket.IO, AWS (ECS, EC2,S3),Firebase Push Notifications,Jazzcash payment,easypaisa payments,Google Map Api's,BullMQ,Docker

Traveluxe London:Multi-Vendor Travel & Hospitality Platform [Link](#)

May '25 — Present

London, United Kingdom

- Designed and implemented the complete backend architecture for the Traveluxe ecosystem.
- Developed scalable APIs powering driver, customer, vendor, and admin applications.
- Created dashboards server for vendors and super admins to manage bookings, payments, and listings.

- Engineered a secure, modular system supporting car rentals, airport transfers, tour packages, and hotel bookings
- Deployed and maintained high-availability server infrastructure with optimized performance and reliability.
- Designed the entire system architecture, ensuring scalability, security, and data integrity.
- **Tech Stack:** Node.js, Express.js, TypeScript, MongoDB, Redis, Socket.IO, AWS (ECS, S3,ALB), Docker, Firebase Notifications,ALB,NGINX

Deggo
[Link](#)

Apr '26 — Present

- Architected and developed the backend infrastructure for Deggo, a ride-hailing platform tailored for the Senegal market.
- Designed and maintained scalable APIs powering passenger, driver, and admin dashboard applications.
- Built secure authentication and onboarding flows for riders and drivers, including OTP verification and session management.
- Implemented geo-aware service availability using zone and region-based polygon mapping, enabling ride operations only within configured service boundaries instead of city-wide activation.
- Developed real-time ride lifecycle management including booking, driver matching, trip state transitions, and live location updates.
- Integrated digital payment workflows and transaction handling to support seamless in-app payment experiences.
- Managed backend data flow, caching, queues, and asynchronous jobs for reliability and performance under load.
- Deployed and maintained scalable cloud infrastructure with focus on uptime, operational stability, and production performance.
- Worked closely with frontend and product teams to deliver new features, optimize operational workflows, and improve platform reliability.
- **Tech Stack:** Node.js, Express.js, MongoDB, Redis, Socket.IO, AWS (ECS, EC2, S3), Firebase Push Notifications, BullMQ, Docker, Google Maps API, GeoJSON Polygon Mapping

Premiere Super Market: Online Grocery E-Commerce Platform
[Link](#)

Feb '24
Lahore, Pakistan

- Developed and launched a complete online grocery store using **Shopify**.
- Customized store themes (DAWN) and layouts to enhance user experience and brand identity.
- Configured product catalogs, pricing, and inventory for seamless shopping and order management.
- Integrated secure payment gateways (SAFEPAY) and delivery modules to streamline operations.
- Collaborated with the client to optimize site structure and ensure smooth deployment.
